

Bexio Connector for Magento 2

Product Specification

The Bexio connector is a two-way connector between Magento 2 and Bexio application. Its aims for seamless integration between both apps and keeping their customers, Products and order details synced. This connector is used for keeping the order, product and customer updates and details synced between Bexio and Magento. The customers and orders created in the Magento app get synced to Bexio through Webhook and APIs and vice-versa. For the app setup, the access token generation method is used which allows linking the apps. From Magento to Bexio the customers, products and orders details are synced, and from Bexio to Magento, the same get synced.

Installation Steps (if purchased via adobe marketplace, please install via composer)

To install the Bexio Extension for Magento 2, follow the steps below.

- 1) Download the extension.
- 2) Access your web server directories and unzip and upload the content of the zip file to app/code/Pits/Bexio directory.
- 3) Run the following commands from the SSH terminal of the server to complete the installation.
 1. Enable the module - `php bin/magento module:enable Pits_Bexio`
 2. Update the database schema - `php bin/magento setup:upgrade`
 3. Generate and pre-compile classes - `php bin/magento setup:di:compile`
 4. Deploy static files - `php bin/magento setup:static-content:deploy`
 5. Clear the cache – `php bin/magento cache:flush`

Features

- Order syncing from Magento to Bexio and vice versa.
- Products syncing from Magento to Bexio and vice versa including inventory.
- Contact/customer syncing from Magento to Bexio and vice versa.
- Invoice creation in Bexio when invoice created in Magento.

- Shipping creation in Bexio when shipment is created in Magento.

Admin Panel Configuration

Navigate to *Admin* > Stores- >Configuration > Pits Extension > Bexio.

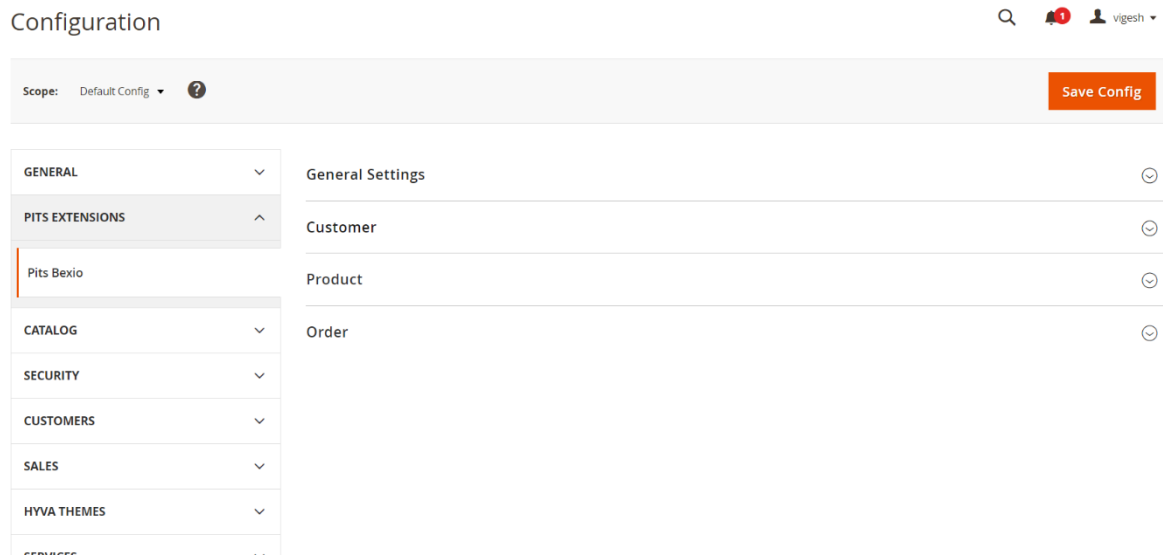

Figure 1 – Bexio Settings – Configuration

Figure 1 displays the admin configurations of the extension, these settings are categorized into four groups, each containing specific fields.

The **General Settings** encompass the following fields

- **Module Enable** – Enable / Disable module.
- **Api Key** – create API key from Bexio app.
- **Select Users** – Select the appropriate users in Bexio.

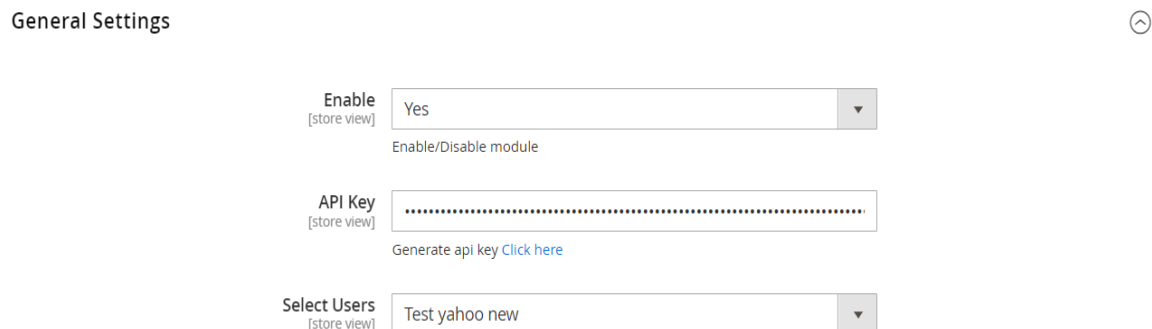

Figure 2 – Bexio Settings – General Settings

The **Customer Settings** encompass the following fields.

- **Create API URL** – This is the end point for customer API in Bexio, already populated by default. This can be changed if any changes in API end point.
- **Contact type** – Select type either Company or Private.
- **Enable Bexio to Magento Sync** – This setting will decide whether to Sync customer data from Bexio to Magento or not.

Workflow

1) Customer Sync

Whenever a customer is created in Magento shop frontend, the customer details will get synced to Bexio.

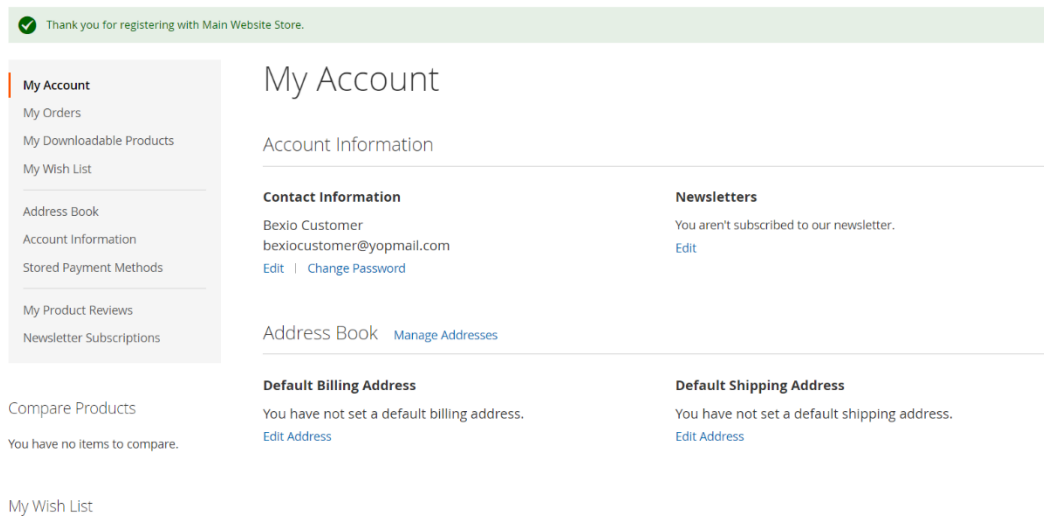

Fig 6– Customer creation in magento

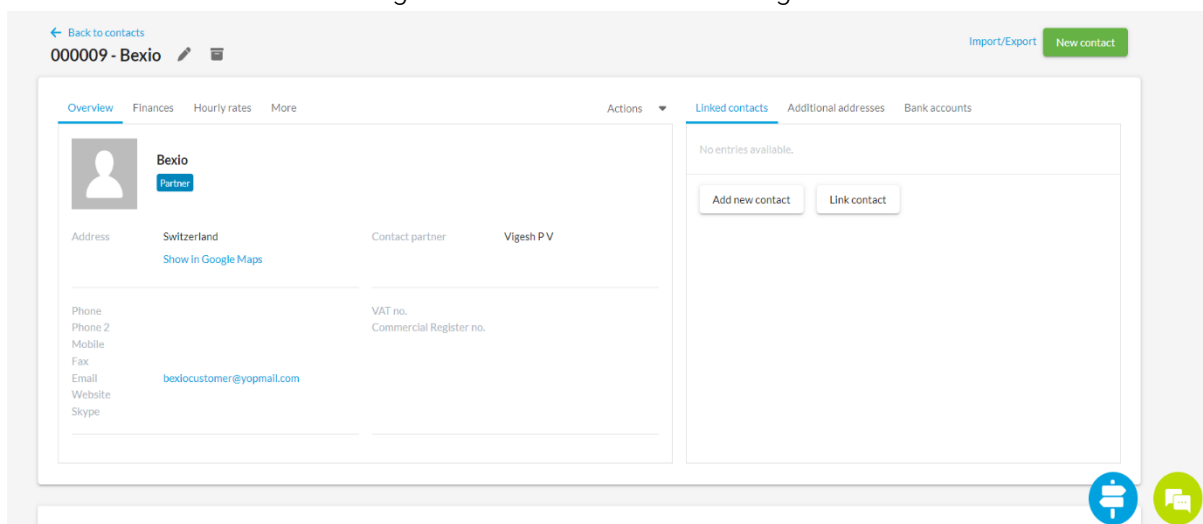

Fig 7 – Bexio customer

Customer address field will get updated in Bexio only while editing address in Magento.

2) Bexio to Magento Customer Sync

The Bexio contact will get synced on Magento store as customers on running the cron job. To add contacts login to Bexio dashboard and click on contacts in navigation.

Fig 15 – Magento order

The screenshot shows the Bexio web application interface for managing an order. The top navigation bar includes 'bexio' logo, user 'Vigesh P V', and 'Settings'. A secondary navigation bar lists various business functions like 'Contacts', 'Sales', 'Projects', etc. The main content area displays the order details for 'Order AU-00021 - Test'. It features a table with columns for 'Type', 'Item', 'Description', 'Quantity', 'Individual price', 'Discount', and 'Price in CHF'. The table lists one item: 'Cello Bottle' with a quantity of 40.00 and a price of 40.00. Below the table, there are sections for 'Delivery' and 'Invoicing' with 'Quantity delivered/pending' and 'Quantity invoiced/pending' fields. A summary table at the bottom shows 'Total' (1'600.00), 'Plus tax 8.10%' (129.60), and 'Amount incl. tax' (1'729.60). On the right side, there is a 'STATUS' section showing 'Pending' and a list of 'STATUS ACTIONS' such as 'Create delivery', 'Create invoice', 'Order has been filled', 'Cancel order', 'SEND' (Email order), and 'ACTIONS' (Print order (PDF), View in bexio network, Duplicate order, Preview, Edit template).

Fig 16 – Bexio order

When placing order from Magento store it will be synced in Bexio app.

If there any currency difference the admin will notify by a message in sales order view page in the backend.

Fig 25s – Token generation

Constraints, assumptions & dependencies

1) Customer Integration

- In Bexio, customer address will update only when editing customer address from Magento.
- When you change the customer's country from address it will only reflect in Bexio if any matches the country in Bexio, otherwise default country "Switzerland" will take.

-

2) Order Integration

- Magento's order increment id set as the title of order and invoice in Bexio.
- In Bexio, there is no shipping method. So, we create a default shipping product in Bexio and save the corresponding shipping amount to it.
- The tax rate should be same in both Magento and Bexio.
- When syncing from Bexio to Magento, cash payments are taken as COD and other payments are marked as Money Order.

3) Product Integration

- Only relevant fields are synced in Bexio.
- Shipping products from Bexio are not synced in Magento.
- Only new products are synced from Bexio to Magento. If you edit Product data and make any changes in Bexio, it will not reflect in Magento. Admin will have to manually update in Magento.

Technical Requirements / Compatible with:

- Magento Open Source 2.4.x
