

Pits Backend Indexer

Product specification

PITS Backend Indexer is a Magento 2 extension developed by PIT solutions which enables admin users to update individual or all indexes manually from the admin panel easily instead of using command line user-interface (CLI). By default, Magento 2 provides command-line re-indexing functionality only which can be hard for the admin users who are not so familiar with the command prompt.

Features

- PITS Backend Indexer provides a Graphical User Interface (GUI) to re-index the indexes easily from the admin panel of the website.
- The extension allows individual and mass indexing of the database.
- Supports access control for admin users.

Installation

To install the Backend Indexer Extension for Magento 2, follow the steps below.

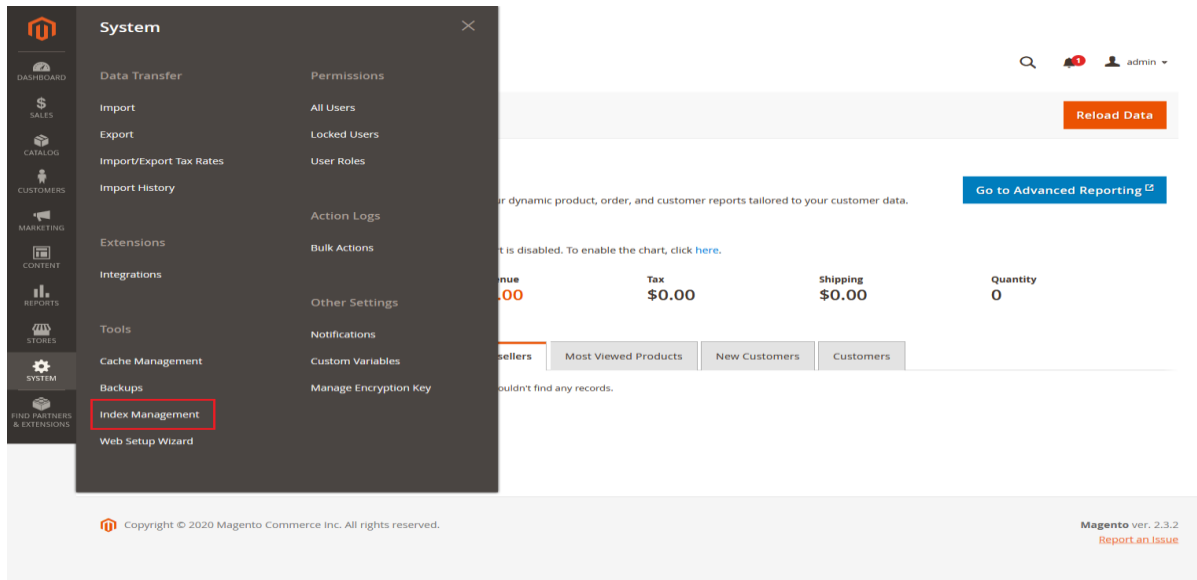

- 1) Download the extension.
- 2) Access your web server directories and unzip and upload the content of the zip file to `app/code/Pits/Indexer` directory.
- 3) Run the following commands from the SSH terminal of the server to complete the installation.

- Enable the module - `php bin/magento module:enable Pits_Indexer`
- Update the database schema - `php bin/magento setup:upgrade`
- Generate and pre-compile classes - `php bin/magento setup:di:compile`
- Deploy static files - `php bin/magento setup:static-content:deploy`
- Clear the cache - `php bin/magento cache:flush`

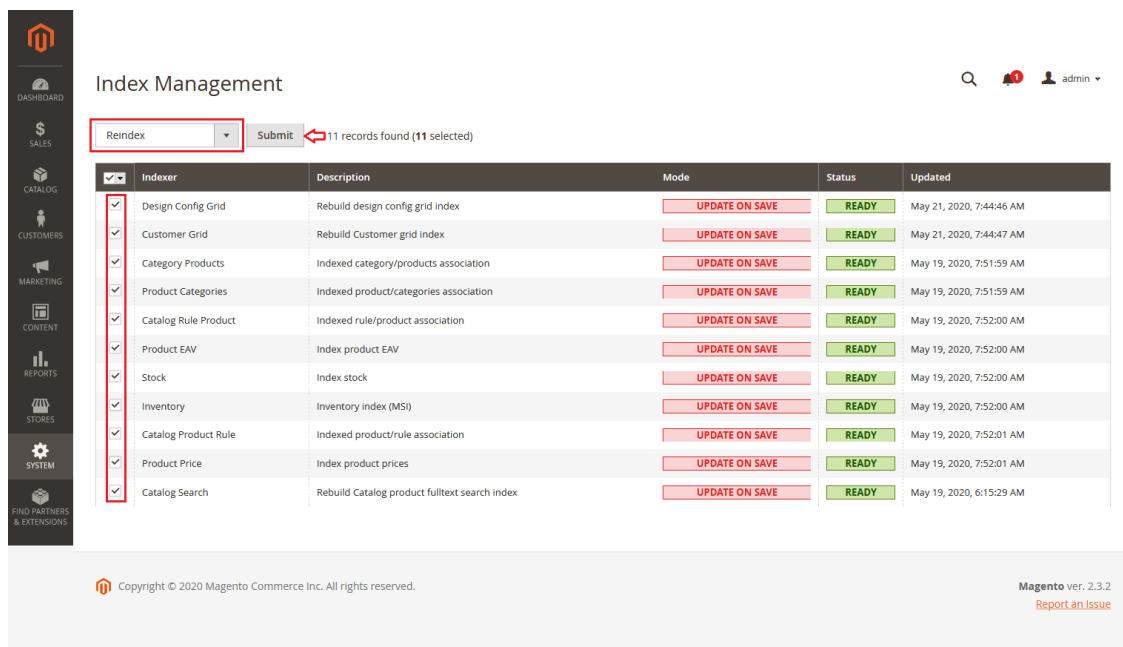

Screenshots / Video

From the admin backend, go to **System > Index Management**

Reindex some indexers

- Click to select the indexers you need to reindex.
- Select **Reindex**
- Click **Submit**

Index Management

11 Indexer(s) are reindexed.
